

ProSight

A search product that improves customer service workflow

Available in TitlePoint[®], ProSight generates a detailed financial profile of a property using title-grade data compiled from Property Insight's title plant and tax databases. It's designed to streamline your search, allowing you to produce more robust property profiles in less time.

ProSight features these capabilities:

- Search using assessed owner, address or tax ID number.
- Select which items to be included in your search results.
- Edit search results using a report editor: add names, tag records and documents and enter freeform notes that will appear in the final report.
- View any document in the search results listing by clicking on the document number to open the image viewer.
- Key fields contained on documents, such as legal descriptions and vesting clauses, can be converted to text form and copied and pasted to other documents.
- ProSight reports can be customized with your company's header and footer, including your logo.

ProSight uses title-grade data

ProSight uses Property Insight's advanced title plant structure to automate searching and ensure that the correct subject property is included in search results. Search results can contain conveyances, encumbrances, liens and judgments and — where available — current tax obligations.

To become a ProSight user

Contact your Account Manager to make ProSight available on your TitlePoint account.
